

Disposable skin staplers & skin staples removers

Perfect solution for surgical interventions

Disposable skin staplers and skin staples removers

Disposable skin staplers and skin staples removers

Key features

Skin staplers are modern products used for skin closure after surgical procedures. They are used in various surgical interventions like general surgery, obstetrics, gynaecology, orthopedics, urology, thoracic, cardiac and plastic surgery. Due to variety of versions the most suitable product can be used in the specific surgical situation.

Skin staplers offered by Grena Ltd may be loaded with three types of staples (standard, wide and high). Each stapler can contain 15, 25 or 35 staples.

Staples can be removed by a special remover.

REF	Staple load	Staple type	Pcs per box
